

# Oracle's Primavera Gateway

Oracle's Primavera Gateway provides a standard data integration solution for connecting Primavera Applications internally and with other enterprise applications.

Organizations can manage full project lifecycles by aligning their back-office budgets, actual costs, assets, labor, and material resources with project operations to ensure accurate forecasting of costs, resources, and schedules. Core project portfolio management (PPM) solutions have traditionally operated in silos, separate from other key enterprise processes. This results in poor visibility into cost and budget overruns, sub-optimal utilization of resources, and increased risk of project failure. Enabling integrated project-based business processes without the need for duplicate data entry is a key factor to ensure project success regardless of complexity, variability, and volume of project-related data.

## INCREASED PROFITABILITY THROUGH SUPERIOR TRANSPARENCY

With billions of dollars at stake and mission-critical projects on the line, project-driven and asset-intensive organizations have no choice but to keep a tight rein on cost, schedules, materials, and resources. Primavera Gateway helps them do so by providing an accurate and real-time picture of performance across all projects, programs, and portfolios of projects throughout the lifecycle.

**Complete.** By aligning costs and schedules in user-friendly applications that integrate easily with Primavera project portfolio management applications as well as third-party systems, enterprise resource planning, and asset management solutions, Primavera Gateway helps organizations reduce project risks and meet critical delivery dates by effectively forecasting and managing costs, schedules, materials, and resources across the enterprise or at a single site.

**Extensible.** Primavera Gateway is highly scalable, giving asset-intensive organizations the power to manage projects, or portfolios of projects, of any size and type. Primavera Gateway enables the interoperability needed between Primavera and third-party applications, so organizations can more effectively plan and manage resource requirements for all types of projects or maintenance work—handling outages, overhauls, shutdowns, turnarounds, capital expansion, or daily maintenance.

**Supported.** Providing customers with a standard Java technology for streamlining business processes, Primavera Gateway swiftly and reliably integrates data from any external application, such as project costing, asset maintenance, materials management, and human resources modules within ERP and EAM solutions. As a result, Primavera Gateway users are able to continue to employ legacy solutions to manage their businesses while relying on Oracle's Primavera solutions to more easily manage their projects, portfolios, and resources across the enterprise. Essentially, Primavera Gateway reduces the risk of project cost overruns and delays by enabling timely and trusted insight into project costs, schedules, material availability, and resource utilization (see Figure 1).

### Key Benefits

- Enterprise-wide project, portfolio, and resource management transparency
- Reduced total cost of ownership
- Easy, configurable, and customizable data synchronizations
- Data consistency between applications
- Improved collaboration with internal and external groups
- Reliable reporting of project parameters across applications

This document is for informational purposes. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described in this document remains at the sole discretion of Oracle.

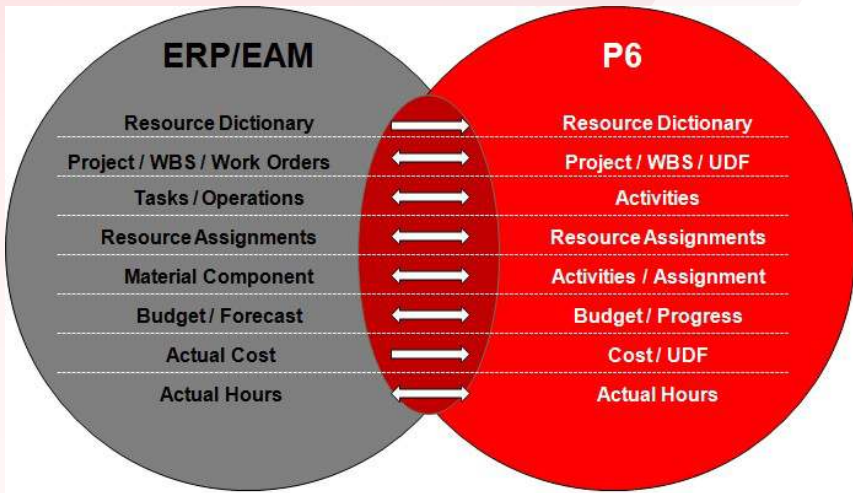

Figure 1. A sample view of the Primavera Gateway-facilitated bidirectional data flow between Primavera and typical ERP / Asset Management solutions.

**Key Features**

- Web-enabled user interface
- Application-agnostic integration capability for Primavera applications
- Standard Java application with no dependency on third-party middleware
- Extensible integration solution with configuration and customization options for each business application
- Designed for scalability and high-performance data exchange

**EASY DEPLOYMENT AND CONFIGURATION**

Deployable on Weblogic Server, Primavera Gateway does not require expensive and cumbersome middleware, dramatically simplifying the installation and configuration of an organization's integration processes (see Figure 2).

**Primavera Gateway Architectural Overview**

- Standard Java Web Application
- Pre-build integration providers for Primavera
- Pluggable providers for external applications
- Seeded data maps and flows to support industry best practices

## MANUAL AND AUTOMATIC DATA SYNCHRONIZATION

A web-enabled user interface allows secure access to key functional areas of integration, such as synchronization, template management, administration, and execution of data exchange between Primavera EPPM and the third-party application (see Figure 3).

### Key Integration Synchronization Capabilities

- Execution of data synchronizations
- In-built scheduler
- Monitoring and data logging

Synchronization Name	Business Flow	Description	Flow Type	Source	Destination	Next Run	Event Listener	Last Run	Last Run Status
Create P3 EPS in Prime as EPS code	Create EPS Code in Prime	The flow sends P3 Project header information	Master Data	P3	Prime	N/A	N/A	N/A	Never Run
Create project header - P3 to Prime	Create project header - P3 to Prime	The flow sends P3 Project header information	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Create project header - Prime to P3	Create project header - Prime to P3	The flow sends Prime Project header information	Project Data	Prime	P3	N/A	N/A	N/A	Never Run
Create WBSscope hierarchy in P3 as Prime	Create WBSscope Code in P3	The flow sends Prime wbs scope structure to P3	Master Data	Prime	P3	N/A	N/A	N/A	Never Run
Get Activities and assignments from P3 to Prime	Get Activities and Assignments from P3	Created table activity, duration, activity status	Project Data	P3	Unlink	N/A	N/A	N/A	Never Run
Get Activity data from P3	Get Activity data from P3	The flow sends activity information from P3	Project Data	P3	Unlink	N/A	N/A	N/A	Never Run
Get Resources and Role Rates from P3 to Prime	Get Resources and Role Rates from P3	Created table Rate Sheets from P3 to Unlink	Master Data	P3	Unlink	N/A	N/A	N/A	Never Run
Map P3 Equip Project Cost Flow for details	P3 Equip Project Data Flow for details	The flow sends activity, project header, resource	Project Data	P3	Sample	N/A	N/A	N/A	Never Run
Map P3 Equip Project Cost Flow for summary	P3 Equip Project Data Flow for summary	The flow sends activity, project header, resource	Project Data	P3	Sample	N/A	N/A	N/A	Never Run
Sample Import Project Synchronization	Sample Import Project Data Flow	The flow sends activity, project header, resource	Project Data	Sample	P3	N/A	ProjectCostList	N/A	Never Run
Send Activity data to P3	Send Activity data to P3	The flow sends activity data from P3 to Unlink	Project Data	Unlink	P3	N/A	N/A	N/A	Never Run
Send Approved Budget & Plan data from P3	Send Approved Budget & Plan data to P3	The flow sends approved budget and plan data	Project Data	Prime	P3	N/A	N/A	N/A	Never Run
Send P3 project data to Prime for Rates	Send P3 project data to Prime for Rates	The flow sends activity, activity rate, calendar, pr	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Send P3 project data to Prime for Schedule	Send P3 project data to Prime for Schedule	The flow sends activity, calendar, activity related	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Send P3 project data to Prime for Scope	Send P3 project data to Prime for Scope	The flow sends activity, calendar, activity related	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Send P3 Resources and Roles to Prime	Send Resources and Roles to Prime	The flow sends resources, rates and associated	Master Data	P3	Prime	N/A	N/A	N/A	Never Run
Send P3 Resources to Prime	Send Resources to Prime	The flow sends resources and associated data	Master Data	P3	Prime	N/A	N/A	N/A	Never Run
Send P3 Rates to Prime	Send Rates to Prime	The flow sends rate data from P3 to Prime	Master Data	P3	Prime	N/A	N/A	N/A	Never Run
Send Proposed Budget & Plan data from P3	Send Proposed Budget & Plan data to P3	The flow sends proposed budget and plan data	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Send Prime project data to P3	Send Prime project data to P3	The flow sends activity, project and WBS data	Project Data	Prime	P3	N/A	N/A	N/A	Never Run
Send Prime project data to P3 for Cost Rates	Send Prime project data to P3 for Cost Rates	The flow sends activity, resource, project and	Project Data	Prime	P3	N/A	N/A	N/A	Never Run
Send Project Cost Data & Progress from P3	Send Project Cost Data & Progress from P3	The flow sends project cost and progress	Project Data	P3	Prime	N/A	N/A	N/A	Never Run
Send Proposed Budget & Plan data from P3	Send Proposed Budget & Plan data to P3	The flow sends proposed budget and plan data	Project Data	Prime	P3	N/A	N/A	N/A	Never Run
Send to Primavera Unlink	Send to Primavera Unlink	The flow sends CDS data deletion summary to	Project Data	P3	Unlink	N/A	N/A	N/A	Never Run
Update from Primavera Unlink	Update from Primavera Unlink	The flow sends CDS table data from Unlink to P3	Project Data	Unlink	P3	N/A	N/A	N/A	Never Run
